

Fungicide

Basilit B85

- Description:** **Basilit B85** is a preventive and curative product intended for the treatment of walls infested by dry rot (by injection or whitewash).
- Authorisations:** The product is authorized by the Ministry of Public Health under no. 5087 B
- Advantages:**
- Without added solvent; non-toxic to human beings by inhalation
 - Odourless and colourless
 - Eliminates the most destructive fungi, such as dry rot and basement mould.
- Characteristics:** Active ingredient: boric acid, 84gr/litre.
Basilit B85 is formulated in aqueous phase.
- possesses very great powers of penetration in masonry.
 - long-term persistence; ten-year guarantee.
- Application:** Ready to use.
In applying the product, proceed as follows:
- strip affected masonry, including the 1 m security zone.
 - eliminate or destroy all affected woodwork.
 - clean the walls with an iron brush.
 - drill holes every 25 cm, in a staggered pattern, to a depth equivalent to 2/3 of the thickness of the masonry.
 - inject 5 litres of the product per m² (for a wall 35 cm thick).
 - spray the wall (approximately 1 litre per m²).
- Do not plaster the walls over fresh product!**
- Precautions during application:**
- Avoid contact with eyes.
 - Keep out of reach of children.
 - Keep away from food and beverages.
